

ASSESSMENT OF MOTOR AND PROCESS SKILLS (AMPS) GRAPHIC REPORT

Client:	Virginia S.	DATE	MOTOR	PROCESS
Occupational therapist:	Anne G. Fisher	Evaluation 1 07/23/1994	-0.93	0.11

The numbers on the ADL motor and ADL process scales are units of ADL ability (logits). The results are reported as ADL motor and ADL process measures plotted in relation to the AMPS scale cutoffs. Measures below the cutoffs indicate that there was diminished quality or effectiveness of performance of instrumental and/or personal activities of daily living (ADL). See the AMPS Narrative Report for further information regarding the interpretation of a single AMPS evaluation.
